DEA COMPLIANCE MANUAL

APPENDIX F

DEA Correspondence

**U.S. Department of Justice
Drug Enforcement Administration**

Washington, D.C. 20537

JAN 25 1992

Ms. Sherry Haber
National Wholesale Druggist Association
105 Oronoco Street
Alexandria, Virginia 22314

Dear Ms. Haber:

It has been brought to the attention of the Drug Enforcement Administration (DEA) that some confusion exists regarding the proper completion of the DEA Form 222 with respect to the "number of lines completed." This letter is written to help alleviate some of the confusion.

Title 21 of the Code of Federal Regulations (CFR), section 1305.06(b) states that only one item shall be entered on each numbered line. It further states that the total number of items ordered shall be noted on the order form in the space provided. On the current version of the DEA Form 222, the aforementioned "space provided" is termed "number of lines completed." When the above requirements are followed to the letter, there is no discrepancy between the number of items ordered and the number of lines completed.

Problems in interpretation have been encountered when the purchaser either uses more than one line to describe an item or voids an item. In the first instance, the correct interpretation would be to list the number of items ordered on the form in the space labeled "number of lines completed." The DEA Form 222 will be revised in its next printing to rename the heading "number of items ordered."

The issue of voided lines on the order form is perhaps a bit less clear cut in its interpretation. In strictly interpreting the regulations, the only conclusion which can be reached which is not open for interpretation is that a supplier may not fill an order form which "shows any alteration, erasure, or change of any description" (21 CFR 1305.11(2)). In fact, instructions provided on the reverse side of the DEA Form 222 advise the purchaser

Ms. Sherry Haber

Page Two

not to make erasures or alterations. They state that if an error should be made, all copies of the form should be voided and kept on file.

In addition, the regulations imply that only a supplier, not a purchaser, may void an item on a DEA Form 222. Section 1305.15(a) of the regulations states:

A purchaser may cancel part or all of an order on an order form by notifying the supplier in writing of such cancellation. The supplier shall indicate the cancellation on Copies 1 and 2 of the order form by drawing a line through the canceled items and printing "canceled" in the space provided for number of items shipped.

Consequently, the supplier is the only individual that has the authority to indicate the cancellation on the order form.

A separate but related issue has also been raised regarding generic substitution of order forms. DEA policy does not preclude generic substitution of identical products provided that the name and National Drug Code number of the actual product shipped is reflected on the form. Therefore, it would be acceptable to make a substitution provided that the customer agrees to accept a generic rather than a brand name product, the generic product of a manufacturer other than the one specified or a brand name product rather than a generic one. Therefore, the purchaser will not be required to submit a new DEA Form 222 to accommodate such a change.

Please disseminate the enclosed information to the members of your organization in an effort to dispel any problems they are perhaps encountering with the form. Thank you for your attention to this matter.

Sincerely,

Gene R. Haislip
Deputy Assistant Administrator
Office of Diversion Control

Order Forms (DEA Form 222)

CC: George Bennett

At a recent NWDA/DEA meeting that I attended, DEA issued the attached letter to further clarify their position on the proper completion of DEA Form 222 with respect to number of lines completed, voided or canceled lines, and generic substitutions. The regulatory interpretations are as follows:

- When two lines are used on an order form to describe one item, the number of lines completed at the bottom should be one. If two lines are used to order one item and "two" is entered in the number of lines completed, the order form must not be filled.
- A customer cannot void or cancel a line on the order form. If an order form is received from a customer with a voided or canceled line, the order form is considered defective and cannot be filled. Only a supplier may void an item on DEA Form 222. The customer may cancel a line by notifying the supplier in writing.
- It is acceptable to substitute generic product for generic product, generic product for brand name product, or brand name product for generic product provided that the products are equivalent, the name and the NDC number of the actual product shipped are reflected on the order form, and the purchaser agrees to the substitution.

Please read the letter for the specifics of these interpretations and pass the information on to the appropriate personnel in your division. Your customers should be notified regarding the consequences of their voiding or canceling a line.

DEA has informed their local offices of these interpretations, and you can expect regulatory enforcement to be consistent with the information contained in the letter.

If you have any questions, please call.

Only a supplier may void an item on DEA Form 222. The customer may cancel a line by notifying the supplier in writing.
- It is acceptable to substitute generic product for generic product, generic product for brand name product, or brand name product for generic product provided that the products are equivalent, the name and the NDC number of the actual product shipped are reflected on the order form, and the purchaser agrees to the substitution.

Please read the letter for the specifics of these interpretations and pass the information on to the appropriate personnel in your division. Your customers should be notified regarding the consequences of their voiding or canceling a line.

DEA has informed their local offices of these interpretations, and you can expect regulatory enforcement to be consistent with the information contained in the letter.

If you have any questions, please call.

FROM: Steve Reardon
SUBJ: DEA Form 222

CC: George Bennett
Clarence Crisp

Please be advised that DEA has made changes on DEA Form 222 (sample attached). They are as follows:

- "No. of Lines Completed" has been changed to "No. of Items Ordered (Must Be Ten or Less)"
- Instruction #8 on the reverse side was changed from:

8. Enter the number of items ordered – this should correspond to the number of lines used. If this number has not been entered, the form will be returned to you for completion before the supplier is allowed to fill it.

TO:

8. Enter the number of *different* items ordered – this generally should correspond to the number of lines used. If a number has not been entered, the form will be returned to you for completion before the supplier is allowed to fill it.

These changes were made in an attempt to facilitate compliance with 21 CFR 1305.06(b) which reads:

(b) Only one item shall be entered on each numbered line. There are ten lines on each order form. If one order form is not sufficient to include all items in an order, additional forms shall be used. Order forms for carfentanil etorphine diprenorphine shall contain only these substances. The total number of items ordered shall be noted on that form in the space provided.

Please pass this information on to the appropriate personnel in your division. If you have any questions, please call.

U.S. Department of Justice
Drug Enforcement Administration

Washington, D.C. 20537

APR 25 1993

Mr. Dan White
Director, Distribution Projects
and Regulatory Affairs
McKesson Drug Company
One Post Street
San Francisco, California 94104-5296

Dear Mr. White:

Reference is made to your recent letter in which you asked for clarification of the Drug Enforcement Administration's (DEA) policy regarding the "Number of Items Ordered" box on DEA Forms 222.

We had hoped to eliminate much of the confusion regarding the proper completion of order forms by changing the heading for this box from "Number of Lines Completed" to "Number of Items Ordered," but based upon your inquiry and others we have received, it is apparent that some confusion still exists.

In your letter, you cited as an example an instance where a purchaser has used five lines on a DEA Form 222 to order controlled substances. Line #1 and line #4 both contain entries for the same product and package size, i.e. "1 x 100 Ritalin Tab 5mg." You asked whether the "Number of Items Ordered" would be "five" or "four."

Section 1305.06 (c) of Title 21 of the Code of Federal Regulations (CFR) specifies that "An item shall consist of one or more commercial or bulk containers of the same finished or bulk form and quantity of the same substance; a separate item shall be made for each commercial or bulk container of different finished or bulk form, quantity or substance." It is our position, therefore, that in the example you cited, four items were ordered. If the purchaser in this case had erroneously indicated that five items had been ordered (most likely based on the fact that five lines had been completed), we would deem this to be a minor error which could be corrected.

Mr. Dan White

Page Two

It has always been our intent to keep all of our Diversion Investigators knowledgeable about interpretations of the Controlled Substances Act and implementing regulations as well as DEA policy. If you are aware of any inconsistencies in our field offices' interpretation of the CSA, the regulations or DEA policy, please bring it to Ms. Carter's or my attention so the situation can be rectified.

If I can be of further assistance, please let me know.

Sincerely,

G. Thomas Gicquel, Chief
Liaison and Policy Section
Office of Diversion Control

U.S. Department of Justice
Drug Enforcement Administration

Washington, D.C. 20537

MAY 18 1993

Ms. Diane P. Goyette
Director of Regulatory Affairs
National Wholesale Druggists' Association
P.O. Box 2219
Reston, Virginia 22090-0219

Dear Ms. Goyette:

This is in response to your letter of March 8, 1993, regarding the issues raised at the National Wholesale Druggists' Association's (NWDA) Regulatory Affairs Working Group meeting in San Antonio.

The issues raised at the meeting are important and we look forward to continuing to work with the NWDA on matters concerning compliance with Federal and state laws and regulations governing controlled substances. We have relayed the working group's concerns regarding consistency in the Drug Enforcement Administration's interpretation of policy to all of our field offices. We have also reminded them that responses to policy questions should be made in writing if requested by the registrant.

Thank you for allowing members of the Office of Diversion Control staff to meet with you. We believe that by sharing concerns and ideas to prevent the diversion of legitimate controlled substance, both DEA's mission and NWDA's needs will be met.

Sincerely,

G. Thomas Gitchel, Chief
Liaison and Policy Section
Office of Diversion Control

1973 - 1993

U.S. Department of Justice
Drug Enforcement Administration

(C)

JUN 23 1993

Mr. Larry L. Holland
Corporate Director
Security and Regulatory Compliance
Alco Health Services Corporation
P.O. Box 959
Valley Forge, Pennsylvania 19482

Dear Mr. Holland:

This is in response to your letter of April 22, 1993, in which you question the use of a former owner's Drug Enforcement Administration (DEA) registration by the new owner following the purchase of a pharmacy. There have been certain instances recently which have resulted in our reevaluating the circumstances under which these procedures may be used.

It is DEA's policy that upon purchasing a pharmacy the new owner must obtain a new DEA registration prior to dispensing controlled substances. However, we recognize that there may be occasions when, due to circumstances beyond the new owner's control, issuance of the appropriate state permits and, consequently, the new DEA registration may be delayed. In such situations, it may be permissible for the new owner to continue the business of the pharmacy under the previous owner's registration, provided certain conditions are met by both new and old owners.

The primary condition is that both the buyer and seller enter into a power of attorney that specifically sets forth the following:

1. The seller agrees to allow the controlled substance activities of the pharmacy to be carried out under the seller's DEA registration;
2. The seller agrees to allow the buyer to carry out the controlled substance activities of the pharmacy, including the ordering of controlled substances, as an agent of the seller;

Mr. Larry L. Holland

Page Two

3. The seller acknowledges that, as the registrant, they will be held accountable for any violations of controlled substance laws which may occur; and

4. The buyer agrees that the controlled substance activities of the pharmacy may be carried out under the seller's registration for no more than 45 days after the purchase date, which shall be recorded in the agreement.

In addition, the buyer must notify the appropriate local DEA office of the proposed use of the seller's DEA registration and, if requested, furnish a copy of the agreement. Should circumstances warrant, the local DEA office may withhold permission for the buyer to use the seller's registration number. The buyer cannot automatically assume that they will be authorized to utilize the seller's registration to conduct controlled substance activities.

With respect to your concerns regarding good faith verifications under such conditions, the best approach is to require that a copy of the power of attorney be provided with the copy of the registration certificate.

I trust the above adequately addresses your concerns. If you have any further questions or comments, please do not hesitate to contact this office at (202) 307-7297.

Sincerely,

G. Thomas Gatchel, Chief
Liaison and Policy Section
Office of Diversion Control

SUBJ: DEA Policy

CC: George Bennett/Dublin

Typically, local DEA offices are willing to provide registrants with regulatory policy interpretations but are hesitant to put these interpretations in writing. However, according to the attached letter, the field offices have recently been instructed to respond to policy questions in writing if requested by the registrant. In response to this new directive from Washington, our policy should be to ask for all interpretations of DEA regulations and policies or approvals of procedures for your operation to be put in writing. This practice will protect us against potential violations that could result when being inspected by DEA investigators who disagree with the interpretation or are new to the local office. If the local office is hesitant to put something in writing, please feel free to provide them with a copy of this letter or contact me, and I will handle it.

If you have any questions, please call.

SUBJ: Change of Pharmacy Ownership:
DEA Policy

Change of pharmacy ownership and continuing operation on a previous owner's DEA registration is an issue which has created ongoing confusion and inconvenience for us and our customers because of varying local DEA interpretations as to whether or not this is allowed.

DEA Headquarters recently documented DEA's official policy in the attached letter, which states that continued operation is permissible when certain conditions are met by both the current and previous owners.

The primary condition is that both the buyer and seller enter into a power of attorney that specifically sets forth the following:

1. The seller agrees to allow the controlled substance activities of the pharmacy to be carried out under the seller's DEA registration;
2. The seller agrees to allow the buyer to carry out the controlled substance activities of the pharmacy, including the ordering of controlled substances, as an agent of the seller;
3. The seller acknowledges that, as the registrant, they will be held accountable for any violations of controlled substance laws which may occur; and
4. The buyer agrees that the controlled substance activities of the pharmacy may be carried out under the seller's registration for no more than 45 days after the purchase date, which shall be recorded in the agreement.

Prior to selling to the new owner, you should obtain a copy of the power of attorney and file it with the copy of the previous owner's DEA registration certificate.

In addition, you must monitor the 45-day limit on controlled substance activity imposed as part of this policy.

If you have any questions, please call.

Mid-Level Practitioners (MLPs)

The Drug Enforcement Administration (DEA) published a final rule in the June 4 Federal Register establishing a new category of DEA registrants, *mid-level practitioners (MLPs)*. The rule defines MLP as "an individual practitioner... other than a physician, dentist, veterinarian, or podiatrist, who is licensed, registered, or otherwise permitted by the United States or the jurisdiction in which he/she practices, to dispense a controlled substance in the course of professional practice." Examples of MLPs include nurse practitioners, nurse midwives, nurse anesthetists, clinical nurse specialists, and physician assistants.

MLPs will now be registered with DEA, but their authority to prescribe, dispense, and order controlled substances is granted by the state in which they practice and varies greatly among the states and types of MLPs (see attached). The final rule places responsibility for verifying this authority on the supplier, a complicated task at best.

I don't believe MLPs represent a significant new class of customers who would generate large volume sales and, because of the compliance difficulties posed by the authority verification responsibility, recommend that we do not sell directly to them. However, if this turns out not to be the case, we can reevaluate this position.

Please pass this information along to the appropriate staff in your division. If you have any questions, please call.

NOTE: The new MLP registration number will begin with the letter "M" rather than the letters "A" or "B" currently used for traditional practitioners.

SUBJECT: DEA Mid-level Practitioner Rule: Information on State Prescribing Authority

As previously reported to you, the Drug Enforcement Administration (DEA) published a final rule in the June 4 *Federal Register* establishing a new category of DEA registrants. Under this rule, mid-level practitioners (MLPs), such as physician assistants and nurse practitioners, will obtain and use their own DEA numbers to prescribe, dispense and order controlled substances, subject to state requirements. The rule went into effect on July 1, 1993. We have attached a copy of a June 1993, *Government Update* article outlining the new regulations (Attachment A).

MLPs will now be registered with DEA, but their authority to dispense controlled substances is granted by the state in which they practice. The final rule places the responsibility for verifying the degree of the MLP's authority to order and prescribe controlled substances on pharmacists, wholesalers and other parties in the distribution chain. Because prescribing authority varies so widely among states and types of MLPs, wholesalers need to be familiar with the restrictions imposed by each state that they service.

NWDA has developed the enclosed materials to familiarize you with the MLP prescribing authority in each state. We hope you will find them helpful in determining your obligations under the new DEA rule. The materials are based on information received from the National Association of Boards of Pharmacy, the American Academy of Physician Assistants, the American Nurses Association and various state authorities. In addition to the *Government Update* article, we have included the following:

Mid-Level Practitioner Prescribing Authority by State Chart (Attachment B) - This chart provides information on the prescribing authority, per state, for the following MLPs: doctors of homeopathy, physician assistants, advanced registered nurse practitioners, "other nurses" and optometrists. *This is only a partial list, containing information on the*

N.A.

more commonly encountered MLPs. It should be noted that other practitioners may be covered under the MLP rule. For the purposes of this chart, the term "other nurses" includes clinical nurse specialists, nurse midwives, certified registered nurse anesthetists and various nurse practitioner specialists.

The chart takes each state and assigns the five MLP groups a number representing their prescribing authority under that state's regulations. MLPs with independent prescribing authority (category 1) or limited prescribing authority (category 3) are probably of the most concern to you as a wholesaler because these MLPs have the greatest degree of authority to prescribe. Dependent prescribing authority (category 2) in some states may also be of concern. A description of the categories appears at the beginning of the chart.

Notes on Dependent and Limited Mid-Level Practitioner Prescribing Authority, by State (Attachment C) - These notes accompany the chart to provide additional information on dependent and limited prescribing authority for physician assistants and nurses. Accordingly, each category 2 and 3 listing on the chart has a corresponding explanation in the notes. Many of the chart entries for other nurses "vary." Where this variation could not be covered in the notes, you will need to contact the state for more information.

State Contact Listings (Attachment D) - Because there are so many different types of MLPs and the prescribing authority for each of these MLPs varies widely by state, you may need to supplement the enclosed information by contacting the states for more information. The contacts at the state Boards of Pharmacy and state licensing agencies listed in this package should be able to answer any questions that you have regarding MLP prescribing authority.

We hope that the enclosed materials will assist you in responding to the requirements of the new DEA mid-level practitioner rule. As new information becomes available we will update these materials for your use. If you have questions regarding the enclosed materials or the mid-level practitioner rule, please contact Robin Pollini, NWDA Regulatory Analyst, Ext. 242.

Vol. 13 No. 6

June 1993

DEA Now Registers MLPs

Changes Could Pose New Burdens For Pharmacists, Wholesalers

The Drug Enforcement Administration (DEA) published a final rule in the June 4 *Federal Register* establishing a new category of DEA registrants. Under the new rule, which goes into effect on July 1, 1993, mid-level practitioners (MLPs) will obtain and use their own DEA numbers in dispensing controlled substances, subject to restrictions imposed by their state of practice.

The final rule defines an MLP as "an individual practitioner...other than a physician, dentist, veterinarian, or podiatrist, who is licensed, registered, or otherwise permitted by the United States or the jurisdiction in which he/she practices, to dispense a controlled substance in the course of professional practice." DEA considers "dispensing" to include administering, prescribing and directly dispensing—delivering to the ultimate user—controlled substances. Examples of MLPs include nurse practitioners, nurse midwives, nurse anesthetists, clinical nurse specialists and physician assistants.

Until now, MLPs have used the DEA number of their supervising practitioner or institution, again subject to state requirements. The new MLP registration numbers will begin with the letter "M" rather than the letters "A" or "B," currently used for traditional practitioners, so they can be identified as a separate registration category.

Although MLPs now will be registered with DEA, their authority to dispense controlled substances is granted by the state in which they practice and varies widely. In the final rule, DEA acknowledges that verifying MLP dispensing authority will pose difficulties, but notes that it will be the responsibility of pharmacists, wholesalers and other parties in the distribution chain to contact the appropriate state officials to verify the degree of dispensing authority an MLP has been granted.

The burden of this verification is expected to fall primarily on pharmacists, who most commonly will receive orders for controlled substances in the form of individual prescriptions from MLP prescribers. However, drug wholesalers also can expect to handle orders for controlled substances bearing the M-designated DEA number. The unique number format should alert wholesalers to the fact that an MLP customer may or may not be authorized to order controlled substances in a given state. Since this authority varies so widely, wholesalers need to be familiar with the restrictions imposed by each state it services.

NWDA currently is compiling information on the states' laws governing MLPs, and will distribute this information to members as soon as it is complete.

ATTACHMENT B**MID-LEVEL PRACTITIONER (MLP) PRESCRIBING AUTHORITY BY STATE**

This table provides information on state prescribing authority for a limited number of mid-level practitioners (MLPs). Please note that for the purposes of this chart, the term "other nurses" includes clinical nurse specialists, nurse practitioners and various nurse practitioner specialists. The codes used to describe the authority granted in each state are as follows:

- 1 - Independent prescribing authority: The MLP has independent authority to order or prescribe controlled and non-controlled substances.
- 2 - Dependent prescribing authority: The MLP may order or prescribe certain controlled substances under the supervision of a physician. See the notes that accompany this table for specific requirements by state.
- 3 - Limited prescribing authority: The MLP's prescribing authority is limited to certain types of drugs. See the notes that accompany this table for specific restrictions by state.
- 4 - The MLP may not order or prescribe controlled and non-controlled substances.

"vary" - Prescribing authority varies among different types of nurses. Contact the state for more information.

ATTACHMENT C
NOTES ON DEPENDENT AND LIMITED PRESCRIBING AUTHORITY BY STATE

AK - Physician Assistants: PAs may prescribe Schedules III-V controlled substances.

Nurses: Advanced registered nurse practitioners (ARNPs) have independent prescribing authority. The Board of Nurses may limit the types of drugs that they can prescribe in accordance with their education and experience.

AZ - Physician Assistants: PAs may prescribe Schedules II-III in a limited 48-hour supply, and Schedules IV-V in a 34-day supply. All prescriptions must contain the name of the supervising physician.

Nurses: Nurse practitioners (NPs) have full prescriptive and dispensing authority upon application and fulfillment of criteria established by the Board of Nursing. NPs may prescribe Schedule II and III drugs (limited to a 48-hour supply per patient) and Schedule IV and V (a one-month supply with no refills per patient). Other drugs may be refilled five times or up to one year.

CA - Nurses: NPs who have satisfactorily completed at least six months of MD-supervised experience in furnishing drugs or devices, who have satisfactorily completed a course in pharmacology and who have been issued a furnishing number by the Board of Nursing may furnish certain drugs or devices incidental to the provision of family planning services.

CO - Physician Assistants: Physicians may delegate limited prescribing authority to certified PAs. PAs may issue prescriptions for non-controlled substances only.

Nurses: NPs may write prescriptions for select drugs pursuant to an established protocol.

CT - Nurses: Nurse practitioners, clinical specialists, nurse midwives and nurse anesthetists may apply for prescriptive practice privileges. ARNPs must apply for licensure in order to prescribe. Dispensing privileges are also granted to ARNPs functioning in public clinics.

DC - Physician Assistants: PAs may sign prescriptions for non-controlled substances on Rx pads that contain the name of the supervising physician and PA.

Nurses: DC provides dependent prescriptive authority for NPs, nurse midwives and nurse anesthetists for Class II-V drugs according to existing federal laws.

FL - Physician Assistants: Legislation passed in 1992 grants PAs dependent authority to prescribe drugs according to a formulary. Although the legislation has been passed, the mechanisms for implementing the legislation will not be fully in place until early fall.

Nurses: NPs have dependent prescriptive privileges for non-controlled substances.

GA - Nurses: Although nurses have no prescribing authority, a 1989 law states that through a protocol a physician may delegate to a nurse in advanced practice the authority to order controlled substances and dangerous drugs.

ID - Physician Assistants: PAs may write prescriptions as agents of their supervising physicians by applying to the board for prescription-writing authority. The board-approved formulary is limited to 24 categories of legend drugs (antibiotics, non-narcotic analgesics, contraceptives, topical and local anesthetics, etc.).

Nurses: Prescribing is allowable for approved NPs based upon a formulary in the rules; NPs may not prescribe controlled substances.

IA - Physician Assistants: Physicians may delegate the function of prescribing drugs, controlled substances, and medical devices to a licensed PA. PAs may prescribe Schedules II-V controlled substances, except Schedule II stimulants and other depressants. PAs may order Schedule II stimulants and depressants with the prior approval and direction of a physician, and may request, receive and supply sample drugs and medical devices.

Nurses: Nurses may write prescriptions for non-controlled substances under an established protocol.

KS - Physician Assistants: PAs may issue prescription orders orally by telephone for Schedule II controlled substances in an emergency. The supervising physician must provide a written prescription within 72 hours. PAs may orally by telephone transmit prescription orders for Schedules III, IV and V controlled substances, as well as non-controlled substances, which may also be prescribed in writing.

Nurses: NPs may prescribe under jointly adopted protocols between the nurse and physician.

ME - Physician Assistants: Physicians may authorize PAs to prescribe or dispense controlled substances. Authorized PAs may issue prescriptions for categories of drugs on the board-approved formulary, which excludes Schedule II controlled substances. All parenterals except insulin are excluded unless prescribed for administration within a hospital, clinic, physician's office or nursing home. The amount of scheduled drugs that may be prescribed may be no more than 100 dose units or a 90-day supply, whichever is less.

Nurses: Prescriptive authority is approved by the Board of Medicine. Limits in prescribing formulary by exclusion (i.e., narcotics).

MD - Nurses: NPs prescribe medications as agreed upon in writing with physicians.

MA - Physician Assistants: PAs may write prescriptions for legend drugs and controlled substances (Schedules II-V). Prescriptions and medication orders must be issued in accordance with guidelines developed by each PA and supervising physician.

MI - Physician Assistants: Physicians may delegate to PAs the prescription of drugs other than controlled substances. The supervising physician's name must be indicated in connection with each individual prescription.

Nurses: Physicians may delegate the prescribing of drugs to RNs, excluding controlled substances.

MN - Physician Assistants: Physicians may delegate to PAs the authority to prescribe and administer legend drugs and medical devices that are appropriate to the practice. This delegation must be approved by the board. Physician and PA must have an internal protocol that lists the drugs and medical devices the PA may prescribe or administer.

Nurses: NPs have prescriptive authority when delegated to do so under a written agreement with a physician. Nurse midwives also have authority to prescribe.

MS - Nurses: NPs have statutory prescriptive authority granted by the Board of Nursing. This authority is based on the accepted protocol, which lists the treatments and medications the NP expects to prescribe in his or her practice. NPs are not allowed to prescribe controlled substances.

MO - Physician Assistants: The regulations do not impose restrictions on the types of drugs that PAs can prescribe. This is left to the discretion of the supervising physician.

MT - Physician Assistants: PAs may prescribe, dispense and administer drugs to the extent authorized by the rules of the medical board and/or the physician's utilization plan. Authority granted to the PA may include Schedule III, IV and V controlled substances, and Schedule II with a 48-hour limit. The medical board does not permit PAs to prescribe thrombolytics.

NE - Physician Assistants: PAs can only prescribe medications as an agent of a supervising physician. The PA may prescribe medications in the name of the supervising physician if the authority has been assigned by the physician (Schedule II controlled substances used for pain control are limited to a 72-hour supply). Prescription label must bear the name of both the PA and the supervising provision.

Nurses: ARNPs have dependent authority based on a practice agreement with their supervising physician.

NV - Physician Assistants: PAs may prescribe poisons, dangerous drugs or devices, but not controlled substances. PAs must be registered with the Board of Pharmacy.

Nurses: ARNPs may prescribe if certified by the Board of Nursing.

NH - Physician Assistants: Prescriptions transmitted by PAs must be based on patient-specific orders from the supervising physician or on written protocols. All Rx for controlled substances must contain the supervising physician's DEA number with the PA's state license number as a three-digit suffix.

NM - Physician Assistants: PAs may prescribe, administer and distribute dangerous drugs other than controlled substances provided it is done under physician supervision and within medical board-approved guidelines and formulary. The formulary lists 70 types of drugs PAs may prescribe.

Nurses: NPs have prescriptive privileges with their own signature in accordance to written protocols with physician supervision.

NY - Physician Assistants: Physicians may assign prescribing authority to registered PAs. PAs may not prescribe controlled substances.

NC - Physician Assistants: PAs are authorized by law to write prescriptions under conditions specified by the state board of medical examiners. PAs may prescribe drugs from a medical board-approved formulary that excludes controlled substances and parenteral preparations except insulin, immunizations, serum, epinephrine and benadryl. A prescription may not indicate a refill except birth control pills and may be for no more than 100 dosage units or a one-month supply.

Nurses: ARNPs may prescribe non-controlled substances under the supervision of a physician.

ND - Physician Assistants: PAs may prescribe controlled substances, except Schedule II, as agents of their supervising physicians.

Nurses: The Board of Nursing is responsible for delegating prescribing authorities. Once approved by the Board, nurses may prescribe drugs under the supervision of a physician. The types of drugs that a nurse can prescribe are determined by their area of expertise (six practice areas) designated by the Board.

OR - Physician Assistants: Physicians may delegate to PAs the authority to administer and dispense limited emergency medications and to prescribe. The medical board's Physician Assistants Committee is authorized to review applications for prescribing and dispensing privileges and to recommend a formulary that may include all or part of Schedules III through V. To prescribe Schedules II through V controlled substances, PAs must be registered with DEA.

PA - Physician Assistants: Regulations are currently under development that would allow PAs to prescribe and dispense drugs at the direction of licensed physicians. The rules include a formulary that excludes Schedules I and II controlled substances. Until the regulations are promulgated PAs have no prescribing authority.

RI - Physician Assistants: PAs may write prescriptions and medical orders. PAs employed by physicians, HMOs or other health care delivery organizations may prescribe legend medications and Schedule V controlled substances, medical therapies, device and diagnostics according to guidelines established by their employers. Guidelines are updated annually. PAs prescribing controlled substances must register with the state drug control division and with DEA.

Nurses: NPs have prescriptive authority for legend drugs but not for controlled substances.

SC - Physician Assistants: Regulations are currently under development that would grant PAs dependent authority to prescribe Schedule V controlled substances. The regulations would also establish a formulary and appropriate protocols. Until these regulations are developed and implemented PAs have no prescribing authority.

Nurses: Nurses are certified through the Board of Nursing for dependent prescribing authority.

SD - Physician Assistants: PAs can communicate information regarding Schedules III-V drugs to the pharmacy either in writing or by phone. PAs must act as agents of physicians to issue prescriptions for controlled substances; the physician decides on drug, dosage, amount and length of therapy.

Nurses: Certified NPs may prescribe under a practice agreement with the supervising physician. NPs act as the agent of the primary supervising physician in providing and prescribing, except for Schedule II controlled substances.

TN - Nurses: Certified NPs may apply to the Board of Nursing for a "certificate of fitness" with privileges to write and sign prescriptions and/or issue non-controlled legend drugs.

TX - Physician Assistants: Physicians may authorize PAs to administer, provide or carry out a prescription drug order (i.e., complete a prescription pre-signed by the supervising physician) in medically underserved areas.

Nurses: ARNPs have prescriptive authority under standing orders or protocols; prescriptions must be "presigned." To be authorized to prescribe the ARNP must serve certain medically underserved populations.

UT - Physician Assistants: PAs may, in accordance with an approved utilization plan, prescribe Schedule IV and V controlled substances for a period not to exceed seven days.

Nurses: All NPs who practice with a physician can apply for prescriptive privileges in accordance with protocols between the NP and physician. NPs can prescribe controlled substances III-V.

VT - Physician Assistants: PAs may prescribe only drugs selected by the supervising physician from the board-approved drug list. The board's approved drug list contains 25 categories. Some categories, such as heavy metal antagonists, antineoplastics, coagulation agents, cardiovascular drugs and oxytoxics, require additional protocols describing in detail the conditions under which the PA will be prescribing. The physician may delegate the prescribing of controlled substances in any of the categories.

VA - Physician Assistants: Regulations are currently being developed that would give PAs dependent authority to prescribe non-controlled substances. The regulations will include a formulary of specific drugs and devices a PA may prescribe under a written protocol with the supervising physician.

Nurses: ARNPs may prescribe most Schedule VI drugs under the supervision of a licensed physician.

WA - Physician Assistants: PAs may issue written or oral prescriptions when approved by the board and assigned by the supervising physician. Prescriptions for drugs in Schedule II-V may be issued for patients under the care of the sponsoring physician.

WV - Physician Assistants: PAs in all settings may issue prescriptions at the direction of their supervising physician. A state formulary excludes Schedule I and II controlled substances, anticoagulants, antineoplastics, radiopharmaceuticals, general anesthetics, and radiographic contrast materials. Drugs listed under Schedule III are limited to a 72-

hour supply without refill. Medical board rules exclude parenterals, except insulin and epinephrine, from the formulary.

Nurses: ARNPs have limited authority to prescribe, including some controlled substances.

WI - Physician Assistants: Supervising physicians may direct a PA to prepare a prescription order for non-controlled substances if the PA prepares the prescription order only in patient situations specified and described in written protocols; the PA consults directly with the physician, when practicable, prior to preparing a prescription; and the prescription contains the name and address of the physician and PA.

WY - Physician Assistants: PAs may prescribe medications as an agent of the supervising physician, except for Schedule I and II controlled substances. When prescribing controlled substances the supervising physician's DEA number is used.

Nurses: Current legislation states that nurses have prescribing and dispensing capabilities under a "collaborative agreement" with a physician. The Attorney General is currently in the process of determining whether this "collaborative agreement" constitutes independent or dependent prescribing authority. Until the issue is resolved nurses do not have prescriptive authority for controlled substances.

Linda Zarlengo/Dublin

At a recent meeting with DEA in Washington, D.C., Jim Pacella, DEA's Policy Unit Chief, discussed DEA registration verification issues with NWDA's Regulatory Affairs Committee. The points Mr. Pacella made are summarized as follows:

- Local DEA offices have been instructed not to verify DEA registrations verbally via the telephone. The reason is that certain wholesalers were using this as the sole means of verifying their customers' DEA registration numbers. Despite these instructions, however, I am aware of local offices that continue to verify numbers over the telephone. My recommendation is that if, in emergency situations, your local DEA office will provide this service, then you should continue to use it as long as the verification is documented on a Regulatory Agency Contact Form. This method, however, should not replace your existing Registration Verification Procedure.
- Local DEA offices should not be verbally issuing DEA registration numbers upon inspections of new registrants. DEA's policy is that a person is not registered until the registration certificate is issued. Although DEA Washington denies it, I know that local DEA offices continue this practice. Again, if your local DEA offices operate in this manner, you should take advantage and service your customer as long as you document the verification and request from your customer a copy of the certificate immediately upon receipt.

- A 60-90 day registration renewal grace period exists during which time you can continue to sell to customers who have yet to receive their renewed registration. I would recommend that you obtain a copy of the customer's renewal application and processed check if possible.
- For those accounts who operate on a physician's DEA registration, the physician's name should also appear on the records for that account; i.e., the invoice should show:

ABC Clinic
Dr. John Smith

If you have any questions regarding these issues, please call.

Drug Enforcement Administration

Washington, D.C. 20537

NOV 29 1993

Ms. Diane P. Goyette
Director of Regulatory Affairs
National Wholesale Druggists' Association
1821 Michael Faraday Drive
Suite 400
Reston, Virginia 22090-5348

Dear Ms. Goyette:

This is in response to your correspondence of November 4, 1993, requesting information on any written clarification of security issues prepared by the Drug Enforcement Administration concerning specifications for cages and security containers. The Office of Diversion Control (OD) routinely disseminates security information to its field offices as part of its effort to insure uniform interpretation and application.

Recently, two security notices were prepared and distributed to the field Diversion Investigators. One addressed the new GSA specification revision for Class 5 security containers and the other addressed the cage configuration utilized for the storage of Schedule III-V controlled substances. The following is a synopsis of those two notices:

Class V Security Containers: This notice covered the General Services Administration's (GSA) specification revisions for improved, manipulation-resistant combination locking devices used on GSA Class 5 and 6 security containers and vault doors. This revision was intended to counter surreptitious entry using an auto-dialing device and/or radiological or emanations analysis. As a result, the specifications were changed to read as follows: "20 man-hours against surreptitious entry; 30 man-minutes against covert entry; and 20 man-hours against radiological techniques."

This notice further stated that only one lock, the Mas-Hamilton X-07, meets the new specifications without modifications. It further explained that the security

Ms. Diane P. Goyette

Page Two

standards listed in 21 CFR 1301.72(a)(1)(i) and 1301.72(a)(3)(ii) have not been revised to agree with the new GSA specifications.

- Lastly, the notice re-emphasized the fact that the regulations do not require a registrant to utilize a GSA Class 5 container. Instead, the regulations spell out the minimum security requirements for a security container or vault door used for the storage of Schedule I and II controlled substances. There are several security containers which, when equipped with a Group 1-R three position dial-type combination lock, meet the current Federal requirements.

Schedule III-V Cage Specifications: This notice clarified the construction specifications for cages utilized for the storage of Schedule III-V controlled substances. As described in 21 CFR Section 1301.72(b)(4)(ii), a cage's mesh construction cannot have openings greater than 2 1/2" across the square. The confusion existed with the phrase "across the square" which is not a standard size measurement used by cage manufacturers to describe mesh fabric. The industry measurement for mesh size is the minimum distance between the wires forming the parallel sides of the mesh.

Some field offices were interpreting this measurement to be the diagonal distance from corner to corner, while other offices were using the distance between the parallel sides of the mesh configuration. A size comparison of the two options shows a substantial mesh size difference.

Based on this comparison and the intent of this regulation, it was decided that the 2 1/2" measurement has to be interpreted as the greatest point of separation in the mesh configuration. Another way of describing this regulation requirement is that the mesh size cannot exceed 1 3/4" by industry standards.

I trust that the above information adequately addresses your request. If you have any additional questions, please do not hesitate to contact this office.

sincerely,

William C. Reinig

DEA Security Issues

CC: George Bennett
Pete Westermann

Attached, for your information and your DEA file, is a letter from Bill Reinig, DEA Diversion Security Specialist, to Diane Goyette, NWDA Director of Regulatory Affairs. The purpose of the letter is to summarize two security notices recently distributed to DEA field offices. One addressed a new GSA Class V specification for vault door construction; the other, controlled substance cage construction.

Evidently, as a result of the change in the GSA Class V vault door specifications, some local DEA offices were requiring vault doors of this new design. Reinig, in the letter, explains that while the GSA description did change, DEA regulations do not automatically require use of a GSA Class V door. Several different designs can meet DEA requirements. The cage construction section is self-explanatory.

If you have any questions, please call.

Re: Order Forms (DEA Form 222)

Attached for your information and your DEA file is a letter issued by DEA to further clarify their position on the proper completion of DEA Form 222 with respect to number of lines completed. The regulatory interpretation is as follows:

- When a purchaser has used five lines on a DEA Form 222 to order controlled substances, and two lines contain entries for the same product and package size, the number of items ordered would be four. If the purchaser erroneously indicated that five items had been ordered, DEA would deem this a minor error which could be corrected.

Please read the letter for the specifics of this interpretation and pass the information on to the appropriate personnel in your division.

If you have any questions, please call.

INTEROFFICE MEMORANDUM

To: Distribution
From: Steve Reardon, Joe Neary
Date: August 12, 1994
Re: Reverse Management Systems (3CI) Waste Disposal Program

Cardinal Health, Inc., has entered into an agreement with Reverse Management Systems (3CI) to dispose of our non-hazardous waste, including controlled substances, legend drugs, OTC items, and aerosols. Reverse Management Systems is registered with the Drug Enforcement Administration in Schedules II, III, IV and V, the Texas Department of Health, and the Texas Department of Public Safety. This registrant status allows them to receive and take possession of controlled substances and legend drugs for the purpose of disposal via incineration.

The pricing schedule is as follows:

1-24,999	pounds	\$0.045/lb.
25T-74,999	pounds	\$0.043/lb.
75T-99,999	pounds	\$0.041/lb.
> 100 T	pounds	\$0.039/lb.

The total pounds will be counted over a twelve-month period that will start with our first shipment. The steps to facilitate this process are outlined on the following page.

It is strongly recommended that this service be our sole method of disposal so that we may take advantage of volume discounts and assure compliance with applicable Federal, State, and local regulations. We believe that Reverse Management Systems (3CI) can provide us with a simple, efficient, and economical means to manage pharmaceutical waste. Please contact Joe Neary or me if, for some reason, you do not intend to utilize this service.

If you have any questions, please call.

Cardinal Health, Inc.

PREPARING PRODUCT FOR DESTRUCTION

STEP ONE:

To arrange for destruction, contact:

Mr. Dennis Ingles, Operations Manager
Reverse Management Systems
DEA Number RE0196611
201 San Augustine Street
Center, Texas 75935

1-800 RX REVERSE (797-3837), or Fax 1-409-598-9539

STEP TWO:

Reverse Management Systems will provide you with DEA 222 Forms for your Schedule II products.

STEP THREE:

Create a debit memo or zero dollar invoice to Reverse Management Systems. This will serve as documentation of the transfer and create required records (ARCOS, etc.).

STEP FOUR:

When preparing product for shipment:

1. Verify that each return is packed according to the products on the schedule II form.
2. Segregate, and package separately, all other schedules from the legend products.
3. Pack aerosols separately.
4. Note that legend and OTC product do not need to be packaged in any special order.
5. Notify Reverse Management Systems by telephone or fax as to when shipment will be made.
6. Attach an A.O.D. tag to the top of the box for all orders to be shipped UPS. All other shipments must have some other proof of delivery receipt.
7. Include a copy of the debit memo or invoice with the shipment.

STEP FIVE:

Upon completion of the products' incineration, you will receive the following receipts:

- a) A copy of the completed DEA Form 41.
- b) A detailed burn report, itemizing each box with third party verification.
- c) An invoice detailing the amount based on per pound price.
- d) Documentation showing the accurate weight and the actual destruction, by incineration date, verified by third party municipality.

SUBJECT: Regulatory Reminder

CC: Michael Proulx
Joe Neary
Art Hammerschmidt
Carol Verrastro

When providing back-up delivery service to another division's customers there are licensing and record keeping issues that must be addressed in order to assure compliance with applicable regulatory requirements. These requirements are as follows:

LICENSING:

Transactions between divisions (except in Georgia and Ohio) qualify for an intra-company exemption, and state licensure is not required. Shipping prescription drugs and/or controlled substances direct to customers within a state requires licensure in most instances. The attached sheet identifies where Cardinal divisions are currently licensed and lists those states where out-of-state licensure is not required. This should assist you in identifying where to go for back-up.

RECORD KEEPING:

If you ship prescription drugs and/or controlled substances directly to another division's customer, your records (invoices, computer-generated sales history reports, ARCos reports, etc.) must show that customer as the recipient of the product. The Prescription Drug Marketing Act (PDMA) and DEA regulations require wholesalers to maintain records of all transactions regarding the receipt and distribution of prescription and controlled drugs. These records must identify the "ship to" location.

We understand the importance of being able to provide this service to our customers. Our intention is not to restrict your ability to do so. Our purpose is to inform you of the regulatory requirements that must be met when doing so.

Joe Neary and I will work with our MIS groups to explore system support for the record keeping issues. In the interim, we are open to suggestions.

I hope this memorandum clearly identifies the issues at hand. If you have any questions or comments, please contact the Corporate Compliance Department at (614) 799-6050.

National Wholesale Druggists'
Association (NWDA)
Director of Regulatory Affairs
P.O. Box 2219
Reston, Virginia 22090-0219

Dear Ms. Goyette:

The Drug Enforcement Administration (DEA) is pleased to announce that the DEA Form 222 (U.S. Official Order Form - Schedule I and II) used to purchase controlled substances from DEA registrants has been changed for clarification purposes. The former line entitled "Number of Lines Completed" has been changed to "Last Line Completed".

This change was made as a result of requests made by DEA registrants to avoid confusion associated with the former requirement for an entry to be made for "number of lines completed". The new forms are already being distributed. Supplies of the old forms should continue to be used until they are depleted.

Please advise your membership of this change. We have enclosed a sample article which may be used for your publications. It is hoped that this change will obviate many problems associated with the former design of the form. If you have any further questions, please contact the Liaison and Policy Section at (202) 307-7297.

Sincerely,

G. Thomas Gitchel, Chief
Liaison and Policy Section
Office of Diversion Control

DEA CHANGES ORDER FORM (DEA-222)

The Drug Enforcement Administration (DEA) has announced that, at the request of registrants, a change has been made to the U.S. Official Order Form for Schedule I and II controlled substances (DEA-222). This change has been made for clarification purposes and involves the replacement of the line entitled "Number of Lines Completed" with "Last Line Completed".

The instructions pertaining to the change which appear on the reverse of each individual form indicate under item "8" the following: "Enter the last line completed - this generally should correspond to the number of lines used. If a number has not been entered, the form will be returned to you for completion before the supplier is allowed to fill it."

While DEA hopes that this clarification will eliminate much of the confusion the language of this part of the order form has caused some registrants over the years, they realize that errors will still occur due to misinterpretation. When it is clear to the supplier that the number of the last line completed has been incorrectly noted due to misinterpretation, rather than an attempt to facilitate diversion, the DEA form 222 should not be rejected.

The new clarified forms have already begun to be distributed although old forms should continue to be used until depleted.

JUL 18 1996

Ms. Diane Goyette
Director of Regulatory Affairs
National Wholesale Druggists Association
P.O. Box 2219
Reston, Virginia 22090-0219

Dear Ms. Goyette:

Thank you for your letter of April 29, 1996, voicing your organization's satisfaction with the April 17, 1996 semi-annual meeting with your membership. I know I speak for all Drug Enforcement Administration (DEA) personnel present at that meeting, in conveying their appreciation for the information presented and the cooperation received.

There are several issues that have been long-standing and we would like to bring you up to date with current activities. The proposed rule on freight forwarding has cleared DEA and is ready to be forwarded to the Department of Justice (DOJ) and the Office of Management and Budget (OMB) for their approval. The DEA ARCOS Unit has resolved the problem of "inadvertent under-reporting" that was attributed to differences in National Drug Code Numbers (NDC) pertaining to sizes. The ARCOS Unit has been able to take care of this problem internally without any further involvement of ARCOS participants.

The last issue centers around delivery of Schedule II order forms by drivers and the associated distribution scenarios. DEA has carefully reviewed the scenarios discussed at the April 17, 1996, meeting and has approved the following circumstances in which driver handling of Schedule II Order Forms (DEA Form 222) will be permitted, and the circumstances under which we will allow DEA Forms 222 to be transmitted by facsimile. DEA will permit the driver to handle DEA Forms 222 provided they are carried in a sealed envelope. DEA will permit the "faxing" of DEA Forms 222 by the customer to the DEA registered distribution center, in order to facilitate the expedient filling of the DEA Form 222. The distributor may prepare the order

Ms. Diane Goyette

Page Two

from the facsimile and then compare the prepared order with the controlled substances, when the original DEA Form 222s arrive with the driver. Under no circumstances will DEA permit the driver to have the sole responsibility for reconciliation of the pre-prepared order with the actual DEA Form 222. DEA also does not approve of the scenario that allows the driver to "fax" the copy of the order form at the cross-docking facility. The cross-docking facility should only be used for the temporary storage of controlled substances in transit and DEA will not recognize any other activity, such as "faxing", at the facility. Further, the driver should have no knowledge as to the contents of the DEA Form 222. Also, it is the opinion of DEA that allowing the drivers to be responsible for sole reconciliation of Schedule II orders does not provide the "special handling" of Schedule II orders that the Controlled Substances Act mandates and the diversion possibilities presented by this scenario are obviously more plentiful.

Please convey this decision to your membership. We will inform all of our field offices of this approved procedure, in the hope that it will prevent admonishments such as the one that one of your members was given for allowing the driver to transport the DEA Forms 222. As always, it was a pleasure meeting with you and your membership. If you have any questions, please contact the Liaison and Policy Section at (202) 307-7297.

Sincerely,

G. Thomas Gitchel, Chief
Liaison and Policy Section
Office of Diversion Control

AUG 28 1996

Ms. Diane Goyette
Director of Regulatory Affairs
P.O. Box 2219
Reston, Virginia 22090-0219

Dear Ms. Goyette:

Reference is made to our recent meeting regarding the facsimile transmission of DEA forms 222 from retail pharmacies to distributors. As I advised you at that time, the Drug Enforcement Administration (DEA) will permit the facsimile transmission of an executed DEA form 222 directly from a retail pharmacy to a distributor to facilitate filling of an order, provided that the facsimile copy is compared with the original copy prior to shipping the order. It is acceptable, although in our view, not desirable, to permit a proprietary driver, acting as an agent/employee of the distributor, to "fax" a DEA form 222 on behalf of the pharmacy, to the distribution center. The practice of allowing common or contract carriers to "fax" DEA forms 222 to distribution centers, however, is not in the public interest and does not effectively guard against diversion.

We realize that distribution centers adopted procedures for facsimile transmission of DEA forms 222 to expedite delivery of controlled substances to their customers. Nevertheless, we are very concerned that a practice that enables common or contract truck drivers, who are subject to only limited security checks and controls, to know exactly what a particular shipment of drugs will contain, poses a significant threat of diversion.

We urge your members, therefore, to cease this practice as soon as possible. It has been represented that the practice of "faxing" DEA forms 222 by common and contract carriers is widespread and well-established in many of your members' distribution centers. Therefore DEA will recognize a transition period until December 31, 1996 to discontinue this practice.

If you have any questions, please let me know.

Sincerely,

G. Thomas Gitchell, Chief
Liaison and Policy Section

Oct. 17 1997

Diane P. Goyette, Director
Regulatory Affairs
National Wholesale Druggists' Association
P.O. Box 2219
Reston, Virginia 20195-0219

Dear Ms. Goyette:

This is in response to your letter of August 13, 1997, regarding the proper procedure for documenting liquid controlled substance loss through accidental breakage of its container.

1. You ask whether such loss should be reported using a DEA Form-41, "Registrants Inventory of Drugs Surrendered," or a DEA Form-106, "Report of Theft or Loss of Controlled Substances."

When a bottle containing a controlled substance is accidentally broken, the registrant should report the loss on a DEA Form-41. The DEA Form-41 is used to report the disposal of controlled substances in the registrant's possession. As you are aware, DEA requires that the loss be reported in order to account for all dispositions of the controlled substance within the closed distribution system. Any remaining controlled substance, with the container labeling, should be disposed of in accordance with Title 21, Code of Federal Regulations (21 CFR), Section 1307.21. A registrant should use a DEA Form-106 to report an unaccounted for loss, a theft or a loss in transit.

2. You also ask what a distributor should use in the "Associated Registrant Number" and "DEA Order Form Number" fields of the ARCCS report.

The DEA ARCCS Reporting Manual states that the registrant, in accounting for the loss on an ARCCS report, should place a code "Y" in the transaction field, and the DEA Area Office Registration Number in the "Associated Registrant Number" field. The "DEA Order Form Number" field should remain blank.

3. And lastly, you inquire whether DEA requires a distributor to keep the pieces of broken bottle as evidence of the incident.

DEA does not require a registrant to keep the broken bottle pieces as evidence of the incident, but does require that the loss be documented as outlined above.

Diane P. Goyette

Page 2

I trust that the foregoing adequately answers your questions. If we may be of further assistance, please do not hesitate to contact this office at (202) 307-7297.

Sincerely,

S. Thomas Gitchel, Chief
